# AIR OPERATED DIAPHRAGM PUMP

Stainless Steel pumps are used in applications which demand high pumping performance, combinations of hot and corrosive fluids, both acidic and alkali. They are the ultimate choice for durable long-life performance. These pumps are typically combined with highly capable and corrosion resistant diaphragms, mainly PTFE and often Viton® and Santoprene™. With these elastomers pumping benzyl diacetone, phosphoric acid, ferric sulfate, isopropyl chloride, transformer oils and similar are ideal. Great for pumping highly aggressive fluids such as aromatic or chlorinated hydrocarbons, acids, caustics, ketone and acetates.

### Diaphragm Options 'X'

Neoprene Nitrile Santoprene™ Hytrel® Viton® PTFE

### Approvals and Certifications

All Teryair® pumps are CE marked and manufactured under an ISO 9001:2015 Quality system - SGS

### Versatility

This pump handles viscous fluids, slurries, solid laden fluids, shear sensitive fluids very well.

No priming needed.

No foaming of fluid pumped.

No stall damages.

Portable and submergible.
